**Manual Testing:** Ali Mohamed Abdelsalam

### 1. Project Overview

Nadasso Art is an online store for original paintings, built by Deviora Studio. According to the test cases, visitors can browse a collection of works, view product pages with photos, names, prices and sizes, add paintings to a cart, and place an order or ask questions through WhatsApp. The site also offers About Us and Contact pages, customer sign-in, registration and password reset, and an English/Arabic language switch. The testing aimed to verify that these features behave as expected and that incorrect input is rejected.

### 2. Testing Overview

Ali Mohamed Abdelsalam performed manual testing using 80 documented test cases. The scenarios cover:

- **Navigation:** header and footer links, logo, cart link and page buttons.
- **Functional flows:** sorting the collection, product page actions, cart total, and ordering through WhatsApp.
- **Forms and input validation:** login, registration, password reset and the order form, including required fields.
- **Negative testing:** 9 cases with invalid or missing input, such as wrong passwords, empty fields and an invalid reset email.
- **Display and language:** product details, carousels, and switching between English and Arabic.

### 3. Test Case Summary

| Metric           | Result |
|------------------|--------|
| Total Test Cases | 80     |
| Passed           | 80     |
| Pass Rate        | 100%   |
| Failed           | 0      |
| Fail Rate        | 0%     |
| Defects Found    | 0      |

80 of 80 test cases passed

4. Key Testing Results

| Area                              | Cases | What was validated                                                                                                                                    | Result |
|-----------------------------------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Login and sign-in                 | 7     | Valid login succeeded. Wrong or empty email and password were refused, with "Required" messages under empty fields.                                   | PASS   |
| Forgot password and registration  | 10    | Reset link requested with valid and invalid emails. A new account was created with valid data; empty fields were rejected.                            | PASS   |
| Site access, navigation, language | 16    | Opening the store, header and footer links, logo, cart and Arabic/English switches led to the expected pages.                                         | PASS   |
| Home page                         | 20    | Buttons reached the right pages; product photos, names, prices and sizes showed; carousel arrows and counter worked.                                  | PASS   |
| Collection and sorting            | 10    | Products displayed and opened correctly; all four sort orders worked.                                                                                 | PASS   |
| Product page and ordering         | 10    | Add to cart, Order now, View larger, In the room and next/previous worked. The cart total was correct, and an order with a missing field was refused. | PASS   |
| About Us and Contact              | 7     | All buttons, including the WhatsApp and enquiry buttons, reached their destinations.                                                                  | PASS   |

Across all 80 test cases, the tested scenarios behaved according to their expected results. Valid input was accepted, invalid or missing input was rejected, and every navigation, sorting and ordering flow reached its intended outcome. No defects were identified during the testing performed.

5. Conclusion

The manual testing of the Nadasso Art website was completed with all 80 test cases passed, a 0% fail rate and no defects found. The documented browsing, account, ordering and contact features performed as expected.

100% Test Cases Passed

0% Failed | 0 Defects Found
